

Cleaved LC3A Antibody

Peptide Affinity Purified Rabbit Polyclonal Antibody (Pab)
 Catalog # AP1805a-400 □

Specification

Cleaved LC3A Antibody - Product info

Application	WB, IHC-P, ICC, IF
Primary Accession	Q9H492 , Q9GZQ8
Other Accession	Q62625 , Q9CQV6 , Q41515 , Q6XVN8 , Q91VR7 , Q2HJ23
Reactivity	Human, Mouse
Predicted	Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit Ig

Cleaved LC3A Antibody - Additional info

Other Names

Microtubule-associated proteins 1A/1B light chain 3A,
 Autophagy-related protein LC3 A, Autophagy-related
 ubiquitin-like modifier LC3 A, MAP1 light chain 3-like protein 1,
 MAP1A/MAP1B light chain 3 A, MAP1A/MAP1B LC3 A,
 Microtubule-associated protein 1 light chain 3 alpha,
 MAP1LC3A

Target/Specificity

This Cleaved LC3A antibody is generated from rabbits
 immunized with a KLH conjugated synthetic peptide between
 89-120 amino acids from human Cleaved LC3A.

Dilution

IF~~1:25
 IHC-P~~1:10~50
 WB~~1:1000
 ICC~~1:10~50

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V)
 sodium azide. This antibody is purified through a protein A
 column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term
 storage store at -20°C in small aliquots to prevent freeze-thaw
 cycles.

Precautions

Cleaved LC3A Antibody is for research use only and not for use
 in diagnostic or therapeutic procedures.

Cleaved LC3A Antibody - Protein Information

Cleaved LC3A Antibody - Protocols

Immunofluorescent analysis of 4% paraformaldehyde-fixed, 0.1% Triton X-100 permeabilized NIH/3T3 (Mouse mouse embryonic fibroblasts cell line) cells labeling MAP1LC3A with AP1805A at 1/25 dilution, followed by Alexa Fluor 488-conjugated goat anti-rabbit IgG (1583138) secondary antibody at 1/400 dilution (green). The nuclear counter stain is DAPI (blue). Immunofluorescence image showing cytoplasm on NIH/3T3 cell line.

Immunofluorescent analysis of 4% paraformaldehyde-fixed, 0.1% Triton X-100 permeabilized HeLa (Human Cervical epithelial adenocarcinoma cell line) cells labeling MAP1LC3A with AP1805A at 1/25 dilution, followed by Alexa Fluor 488-conjugated goat anti-rabbit IgG (1583138) secondary antibody at 1/400 dilution (green). Immunofluorescence image showing

Cleaved LC3A Antibody - Background

Macroautophagy is the major inducible pathway for the general turnover of cytoplasmic constituents in eukaryotic cells, it is also responsible for the degradation of active cytoplasmic enzymes and organelles during nutrient starvation. Macroautophagy involves the formation of double-membrane bound autophagosomes which enclose the cytoplasmic constituent targeted for degradation in a membrane bound structure, which then fuse with the lysosome (or vacuole) releasing a single-membrane bound autophagic bodies which are then degraded within the lysosome (or vacuole). MAP1A and MAP1B are microtubule-associated proteins which mediate the physical interactions between microtubules and components of the cytoskeleton. These proteins are involved in formation of autophagosomal vacuoles (autophagosomes). MAP1A and MAP1B each consist of a heavy chain subunit and multiple light chain subunits. MAP1LC3a is one of the light chain subunits and can associate with either MAP1A or MAP1B. The precursor molecule is cleaved by APG4B/ATG4B to form the cytosolic form, LC3-I. This is activated by APG7L/ATG7, transferred to ATG3 and conjugated to phospholipid to form the membrane-bound form, LC3-II.

vesicles staining on HeLa cell line. The nuclear counter stain is DAPI (blue). The right image is HeLa cells treated with Chloroquine 50µM for 16h.

AP1805A staining Cleaved-APG8a in Human heart tissue sections by Immunohistochemistry (IHC-P - paraformaldehyde-fixed, paraffin-embedded sections). Tissue was fixed with formaldehyde and blocked with 3% BSA for 0.5 hour at room temperature; antigen retrieval was by heat mediation with a citrate buffer (pH6). Samples were incubated with primary antibody (1/25) for 1 hour at 37°C. A undiluted biotinylated goat polyvalent antibody was used as the secondary antibody.

Western blot analysis of lysates from A431 cell line, untreated or treated with chloroquine, 100ng/ml, using Cleaved-APG8a (MAP1LC3A) Antibody (Cat. #AP1805a)(upper) or Beta-actin (lower).

Western blot analysis of lysates from NIH/3T3 cells, untreated or treated with chloroquine, using Cleaved-APG8a (MAP1LC3A)(RB52604)(upper) or Beta-actin (lower).

Western blot analysis of lysates from NIH/3T3 cells, untreated or treated with chloroquine, using Cleaved-APG8a (MAP1LC3A)(Cat. #AP1805a)(upper) or Beta-actin (lower).

Western blot analysis of lysates from

A431 cell line, untreated or treated with chloroquine, 100ng/ml, using Cleaved-APG8a (MAP1LC3A)(Cat. #AP1805a)(upper) or Beta-actin (lower).

Western blot analysis of anti-cleaved-LC3 (APG8a) Pab (Cat. #AP1805a) in mouse brain tissue lysate. Cleaved-LC3 (APG8a) was detected using the purified Pab.

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.

5Y cells were pretreated with 5nM bafilomycin for 24hr and fixed in 4% of paraformaldehyde. Treatment with Cat# AP1805a antibody at dilution 1:100. Data courtesy of Jianhui Zhu, MD, PhD &
